NAME

iapws - Compute light and heavy water properties.

SYNOPSIS

iapws *SUBCOMMAND* [OPTION...] ARG...

DESCRIPTION

iapws is a command line interface which computes the properties of light and heavy water according to IAPWS.

SUBCOMMANDS

Valid subcommands are:

+kh   Compute the Henry's constant for gases in H2O or D2O. The default behavior is to compute the constant kH for O2 at 25$Â°$C. See options.

+kd   Compute the vapor-liquid distribution constant for gases in H2O or D2O. The default behavior is to compute the constant kD for H2 at 25$Â°$C. See options.

Their syntax is:

+kh   [OPTION...] T...

+kd   [OPTION...] T...

OPTIONS

kh:

--temperature, -T TEMPERATURE...
  Temperature in $Â°$C. Default to 25$Â°$C.

--fugacity, -f FUGACITY...
  Liquid-phase fugacity in MPa. Default to 0.1

--gases, -g GAS...
  Gases for which to compute kH. Default to O2

--D2O   Set heavywater as the solvent.

--listgases
  Display available gases for computing kH.

kd:

--temperature, -T TEMPERATURE...
  Temperature in $Â°$C. Default to 25$Â°$C.

--x2, -x x2...
  Molar fraction of gas in water. Default to 1

--gases, -g GAS...
  Gases for which to compute kD. Default to H2

--D2O, Set heavywater as the solvent.

--listgases
  Display available gases for computing kD.

all:

> **--usage, -u**
>> Show usage text and exit.
>
> **--help, -h**
>> Show help text and exit.
>
> **--verbose, -V**
>> Display additional information when availabl
>
> **--version, -v**
>> Show version information and exit.

> > Return the version

> > **o character(len=:), pointer :: fptr**
> > > Fortran pointer to a string indicating the version.

o pure subroutine kh(T, gas, heavywater, k)
    Compute the henry constant kH in MPa for a given temperature ($x_2 = 1/kH$).

    o real(dp), intent(in), contiguous :: T(:)
        Temperature in K.

    o character(len=*), intent(in) :: gas
        Gas.

    o integer(int32), intent(in) :: heavywater
        Flag if D2O (1) is used or **H2O**(0).

    o real(dp), intent(out), contiguous :: k(:)
        Henry constant in MPa. Filled with NaNs if gas not found.

o pure subroutine kd(T, gas, heavywater, k)
    Compute the vapor-liquid constant kd for a given temperature ($kd = y_2/x_2$).

    o real(dp), intent(in), contiguous :: T(:)
        Temperature in K.

    o character(len=*), intent(in) :: gas
        Gas.

    o integer(int32), intent(in) :: heavywater
        Flag if D2O (1) is used or **H2O**(0).

    o real(dp), intent(out), contiguous :: k(:)
        Vapor-liquid constant (adimensional). Filled with NaNs if gas not found.

o pure function ngases(heavywater)result(n)
    Returns the number of gases.

    o integer(int32), intent(in) :: heavywater
        Flag if D2O (1) is used or **H2O**(0).

    o integer(int32) :: n
        Number of gases.

o function gases(heavywater)result(list_gases)
    Returns the list of available gases.

    o integer(int32), intent(in) :: heavywater
        Flag if D2O (1) is used or **H2O**(0).

    o type(gas_type), pointer :: list_gases(:)
        Available gases.

o function gases2(heavywater)result(str_gases)
    Returns the available gases as a string.

    o integer(int32), intent(in) :: heavywater
        Flag if D2O (1) is used or **H2O**(0).

    o character(len=:), pointer :: str_gases
        Available gases

o pure subroutine psat(Ts, ps)
    Compute the saturation pressure at temperature Ts (273.13 K <= Ts <= 647.096 K).

    o real(dp), intent(in), contiguous :: Ts(:)
        Saturation temperature in K.

    o real(dp), intent(out), contiguous :: ps(:)
        Saturation pressure in MPa. Filled with nan if out of validity range.

o pure subroutine Tsat(ps, Ts)
Compute the saturation temperature at pressure ps (611.213 Pa <= ps <= 22.064 MPa).

> **o real(dp), intent(in), contiguous :: ps(:)**
> Saturation pressure in MPa.

> **o real(dp), intent(out), contiguous :: Ts(:)**
> Saturation temperature in K. Filled with nan if out of validity range.

o pure subroutine wp(p, T, prop, res)
Compute water properties at pressure p in MPa and temperature T in Kelvin.

> **o real(dp), intent(in) :: p(:)**
> Pressure in MPa.

> **o real(dp), intent(in) :: T(:)**
> Pressure in K.

> **o character(len=*), intent(in) :: prop**
> Property (v, u, s, h, cp, cv, w)

> **o real(dp), intent(out) :: res(:)**
> Filled with NaN if no adequate region is found.

o pure subroutine wr(p, T, res)
Get the water region corresponding to p and T.

> **o real(dp), intent(in) :: p(:)**
> Pressure in MPa.

> **o real(dp), intent(in) :: T(:)**
> Temperature in K.

> **o integer(int32), intent(out) :: res(:)**
> Region 1 to 5 if found or **-1**.

o pure subroutine wph(p, T, res)
Get the water phase corresponding to p and T.

> **o real(dp), intent(in) :: p(:)**
> pressure in MPa.

> **o real(dp), intent(in) :: T(:)**
> Temperature in K.

> **o character(len=1), intent(out) :: res(:)**
> Phases: **l**(liquid), **v**(VAPOR), **c**(SUPER CRITICAL), **s**(SATURATION), **n**(UN-KNOWN).

o pure subroutine Kw(T, rhow, k)
Compute the ionization constant of water Kw (273.13 K <= T <= 1273.15 K and 0 <= p <= 1000 MPa).

> **o real(dp), intent(in) :: T(:)**
> Temperature in K.

> **o real(dp), intent(in) :: rhow(:)**
> Mass density in g.cm^{-3}.

> **o real(dp), intent(out) :: k(:)**
> Ionization constant. Filled with NaN if out of validity range.

NOTES

To **use** *iapws* within your fpm project, add the following to your fpm.toml file:

```
[dependencies]
iapws = { git="https://github.com/MilanSkocic/iapws.git" }
```

- dp stands for double precision and it is an alias to real64 from the iso_fortran_env module.

- l => liquid

- v => vapor

- c => super critical

- s => saturation

- n => unknown

EXAMPLE

Example in Fortran

```fortran
program example_in_f
use stdlib_kinds, only: dp, int32
use iapws
implicit none
integer(int32) :: i, ngas
real(dp) :: T(1), kh_res(1), kd_res(1), wp_res(1), p(1)
real(dp) :: Ts(7), ps(7)
real(dp) :: x(3), y(3)
integer(int32) :: r(3)
character(len=1) :: s(3)
character(len=2) :: gas = "O2"
integer(int32) :: heavywater = 0
type(gas_type), pointer :: gases_list(:)
character(len=:), pointer :: gases_str
