

NAME

version – get the library version

LIBRARY

Codata library (*libiapws*, *-liapws*)

SYNOPSIS

Fortran **function version(result(*fptr*))**
 character(len=:), pointer :: *fptr*

C **char* iapws_version()**

Python **str: pyiapws.__version__**

DESCRIPTION

Get the library version.

RETURN VALUE

pointer Pointer to the version string.

EXAMPLE

Fortran:
 use iapws
 print *, "version = ", version()

C:
 include <stdio.h>
 include "iapws.h"
 printf("version = %s\n", iapws_version());

Python:
 import pyiapws
 print(f"version = {pyiapws.__version__}")
