

NAME

Tc – critical temperature

LIBRARY

iapws library (*libiapws*, *-liapws*)

SYNOPSIS

Fortran **real(dp), parameter :: Tc_H2O**

real(dp), parameter :: Tc_D2O

C **const double iapws_r283_Tc_H2O;**

const double iapws_r283_Tc_D2O;

Python **float:Tc_H2O**

float:Tc_D2O

DESCRIPTION

Critical temperature constants for water, **Tc_H2O**, and heavy water, *Tc_D2O*, used for computing the water properties.

EXAMPLES

Fortran

```
use iapws
real(dp) :: T = Tc_H2O
real(dp) :: T = Tc_D2O
```

C

```
#include "iapws.h"
double T;
T = iapws_r283_Tc_H2O;
T = iapws_r283_Tc_D2O;
```

Python:

```
import pyiapws
T = Tc_H2O
T = Tc_D2O
```
