

NAME

pc – critical pressure

LIBRARY

iapws library (*libiapws*, *-liapws*)

SYNOPSIS

```
Fortran      real(dp), parameter :: pc_H2O

              real(dp), parameter :: pc_D2O

C            const double iapws_r283_pc_H2O;

              const double iapws_r283_pc_D2O;

Python      float: pc_H2O

              float: pc_D2O
```

DESCRIPTION

Critical pressure constants for water, **.pc_H2O**, and heavy water, *pc_D2O*, used for computing the water properties.

EXAMPLES

```
Fortran
  use iapws
  real(dp) :: T = pc_H2O
  real(dp) :: T = pc_D2O
```

```
C
#include "iapws.h"
double T;
T = iapws_r283_pc_H2O;
T = iapws_r283_pc_D2O;
```

```
Python:
import pyiapws
T = pc_H2O
T = pc_D2O
```
